Streamlining IT Procurement:
Automating Standard Laptop Orders with Flow Designer

1. Brainstorming & Ideation Phase

Introduction

IT departments frequently receive laptop requests from employees. Handling these requests manually can take a lot of time and may result in delays or errors. The idea of this project is to automate the standard laptop procurement process using **ServiceNow Flow Designer**.

Content

The main idea is to create an automated workflow where an employee submits a standard laptop request through the Service Catalog. Based on the request details, Flow Designer automatically processes the request and triggers the required procurement activities.

Key Points

- Create a standard laptop catalog item.
- Allow employees to submit laptop requests.
- Automate approval activities.
- Automatically create procurement or fulfillment tasks.
- Notify users about request progress.
- Reduce manual work and processing time.

Conclusion

The brainstorming phase helped identify the need for automating standard laptop orders. The proposed idea focuses on reducing manual work, improving processing speed, and creating a simple and efficient IT procurement process using ServiceNow Flow Designer.
