Streamlining IT Procurement:
Automating Standard Laptop Orders with Flow Designer

6. Project Testing Phase

Introduction

Testing ensures that the automated laptop procurement process works correctly and handles different situations properly.

Content

Test Cases:

1. Submit standard laptop request – Request should be created.
2. Submit request with valid details – Flow should start.
3. Approval required – Approval should be generated.
4. Approval completed – Fulfillment task should be created.
5. Request rejected – Request should follow rejection path.
6. Task assigned – Correct IT/procurement team should receive task.
7. Notification triggered – User should receive appropriate notification.
8. Request completed – Request status should be updated.

Testing Goals: Verify the flow trigger, approval logic, task creation, notifications, and end-to-end automation.

Conclusion

The testing phase verifies that the automated laptop procurement workflow performs the expected operations correctly. Testing different scenarios helps identify errors and ensures that requests, approvals, tasks, and notifications work as intended.
